reDataVault's infrastructure hardware includes state-of-the-art storage area networks (SANs) and a world-class content delivery network for provisioning millions of images. Our systems are fully redundant with guaranteed uptime over 99.8%. And our real-time RETS database server accesses national MLS listings with no limits and no timeouts.

Our MLS data is standardized to be consistent, accurate, up-to-date, and reliable in all syndication and aggregation situations, so you can focus getting listings out there instead of solving data headaches. With over 300 MLSs aggregated nationwide, reDataVault represents over 12 million listings.

Our oversight capabilities allow you unparalleled insight into data delivery, data transactions, and feed access and usage. And it's easy to both start-and stop-data flowing with our centralized dashboard.

reDataVault's features include:

Consistency: Enjoy standardized formatting for all listing data and images for a full range of property classes, including Residential, Lots/Land, Multi-Family, Commercial, and Rentals. Addresses are standardized and property images are accessed over a fast content-delivery network.

Reporting: Track data delivery, verify data transactions in detail, and see who's accessing your feeds or exceeding their allowances...and get click-stream consumer activity and impression reports from syndicated listings.

Automation: Sending feeds is no muss, no fuss. Just set up a license, click a button, and your data starts flowing.

Workflow: Structure a workflow that's right for your organization and automatically route the paperwork, notifying everyone in the review and approval process.

Transparency: Easily see all data-product transactions by licensee or date range, and review publisher agreements' terms of use side-by-side.

Convenience: Set up your exports yourself and turn your feeds on or off with one click. Syndicate all your listings in a single feed, no matter how many MLSs you use.
