

# Data Licensing and Compliance

Keep your agreements secure, up to date, and in compliance. When you use reDataVault, you can monitor, manage, and customize your licenses from a single dashboard.

It's a dynamic way to manage all your data licensing agreements with your brokers and vendors, and the most efficient way of getting both the big picture and the small details necessary to ensure compliance.

reDataVault also offers you the opportunity to generate additional revenues by building products that use your MLS data under license. You decide which products fit your members' needs, or define your own product offerings. You can also specify whether licensing is broker opt-in; broker opt-out; or full MLS.

And best of all: You are in constant control with the power to approve, reject, or manage any data feed with just a couple of clicks.

## reDataVault's features include:

**Digital security:** Everything is handled in our reliable, secure cloud, with automated forms and digital signatures for accuracy and forensic accountability.

**Compliance:** Ensure that the correct feeds and licenses are in place at all times. Plus, reDataVault maintains a list of all URLs that feature your data under agreement, making it easier for you to create a compliance and review schedule.

**Document management:** reDataVault's Web portal stores all your data licenses, agreements, notes, approvals, and data feed particulars in one convenient, secure place in the cloud.

**Customized control:** Select precisely which data exports you want to offer for each license agreement or quickly disable, suspend, or terminate any feed or agreement.

**Flexibility:** Define and publish data exports to create a variety of data "products" you can offer to create new revenue streams.

**Watermarking:** For each data license, create a unique watermark image that is merged into every image to provide provenance and proof of licensing.
