

# Overview

reDataVault supports the single largest aggregation of real estate information in the United States and offers a superior management system that enables Multiple Listing Services and associations to take complete control their data.

Our cloud-based system and custom-branded, private web portal give you unparalleled insight, management, and control over your data management, data licensing and compliance, account management, and syndication needs.

It's easy to use, with a simple and intuitive interface and robust search tools, but incredibly powerful; reDataVault aggregates over 300 MLSs aggregated nationwide and represents over 12 million listings. All data is standardized for addresses and images and covers a full range of property classes, including Residential, Lots/Land, Multi-Family, Commercial, and Rentals. And it's consistent, accurate, up-to-date, and reliable.

reDataVault's infrastructure hardware includes state-of-the-art storage area networks (SANs) and a world-class content delivery network for provisioning millions of images. Our systems are fully redundant with guaranteed uptime over 99.8%. And our real-time RETS database server accesses national MLS listings with no limits and no timeouts.

## reDataVault allows MLSs and brokers to:

Control data-use policies and procedures

Store, manage and process licensing agreements

Easily create new accounts and agreements with self-serve onboarding

Turn data products and accounts on or off with just a few clicks
